Preface

This booklet contains the lecture notes for EC 325: Econometrics at Colby College.

These notes are meant to supplement the course readings.

The content in this book is heavily inspired by three main texts, which are required for this course:

1. Wooldridge (2019)
2. Angrist and Pischke (2014)
3. Wickham, Çetinkaya-Rundel, and Grolemund (2023)

1 Introduction

This is a book created from markdown and executable code.

1.1 About Me: Prof. Ray Caraher

I am a recent PhD from UMass Amherst. My research focuses on the relationship between public/economic policy and maternal, infant, and child health and racial/ethnic health disparities.

1.2 What is this Class About?

Econometrics: “...statistical methods for estimating economic relationships, testing economic theories, and evaluating and implementing government and business policy.”

1.3 What is this Class About?

Or, in my opinion,

Econometrics: The practice of using statistical, quantitative methods to study social phenomena and provide insights into public policy

Modern econometrics has really focused on identifying the **causal effects** of social phenomena/policy as opposed to **correlations**

2 Summary

In summary, this book has no content whatsoever.
